

**S**harks that are forced out of their natural habitat due to global warming begin to turn aggressive. As the temperatures of the water increase, sharks may move into new locations where they will be more comfortable. This means they can be in areas where people are fishing, boating, and swimming. Additionally, many researchers believe that a shark's instincts are confused by the different water conditions. There are many other threats as well that threaten the existence of sharks everywhere. Much like the American financial crisis that put millions into foreclosure, sharks face a very similar threat that is capable of forcing these sea creatures out of their homes.

# Forced to flee their homes

**Global Warming** isn't just a human matter anymore. It's a global matter. Every species is effected. The world is a changing place; let's change it for the better. Over **21** species of sharks are in danger of extinction due to climate change and global warming. Let's not make this impending crisis a reality.

**Join the fight** against global warming.
